READY TO INSTALL RTI - DUO 80MM IN GROUND MONITORING SYSTEM

EASY 3 STAGE INSTALL

80mm In Ground Bait Station
provides a 3-Quick stage install.
Clip, Slip & Drop.

Duo Timber Type
Pinus Radiata and
Eucalyptus Regnans
Soft wood and Hardwood.

Kits of 16 are pre loaded
with timber, sand sleeve
attractant and a durable notice

TimberSecure
TERMITE INSURANCE
APPROVED SYSTEM

PRODUCT INNOVATION TREKKER BAIT NIGHT EYE

Trekker Bait Night Eye utilizes our highly
palatable bait matrix combined with
fluro charged particles.

Exterminex™ Night Eye is a great sales
tool kit to prove to your customers
the uptake of the bait

Showing your customer the effectiveness
of the bait will provide confidence.

A COMPLETE SYSTEM PROVEN TO ELIMINATE AUSTRALIAN TERMITES FAST

Exterminex™, a highly palatable bait with a fast uptake capitalizes on the food-sharing behavior of termites to spread toxicant throughout the entire colony which eventually results in colony elimination

This proven technique prioritizes colony elimination in accordance with AS 3660 by reducing the risk of re infestation. Coupled with the Exterminex™ IG monitoring system, long term protection and early interception can be achieved.

What makes Exterminex™ one of the most highly sought after bait is that termites do not shy from Exterminex™ highly palatable bait matrix that consists of natural form alpha cellulose with attractants and feeding stimulants.

One of the most palatable baits in the market, Exterminex™ has helped solve termite infestations in over 70,000 sites since 2012!

ON SITE TRAINING & TENDER PROPOSALS

Exterminex™ provide on-site staff training for our clients. This includes collaboration with our in house entomologists and development team.

In addition Exterminex™ users can capitalize on having our representative attend proposals to help secure your job.

PROVE WITH SCIENCE DNA TESTING

Exterminex™ provides an industry first, DNA Diagnostics Sampling Kit. This will specifically rule out any doubts when or if a new infestation occurs after treatment.

One of the major concerns in managing subterranean termites usually lies in the location of the colony and identification of the infestations. At times even after termite control measures have been implemented, uncertainties arises due to:

- 1) Has the original colony been successfully eliminated?
- 2) Is there 1 or more colonies in the premise?

How can Exterminex™ DNA Sampling help me ?
The DNA identification will provide scientific answers if termites are in fact a new or returning colony.

With such facts answered with science, Pest Control Operators can then take immediate course of actions.

Each Exterminex™ DNA Sampling contains 30 tubes which can be used to collect 30 samples at 30 separate sites.

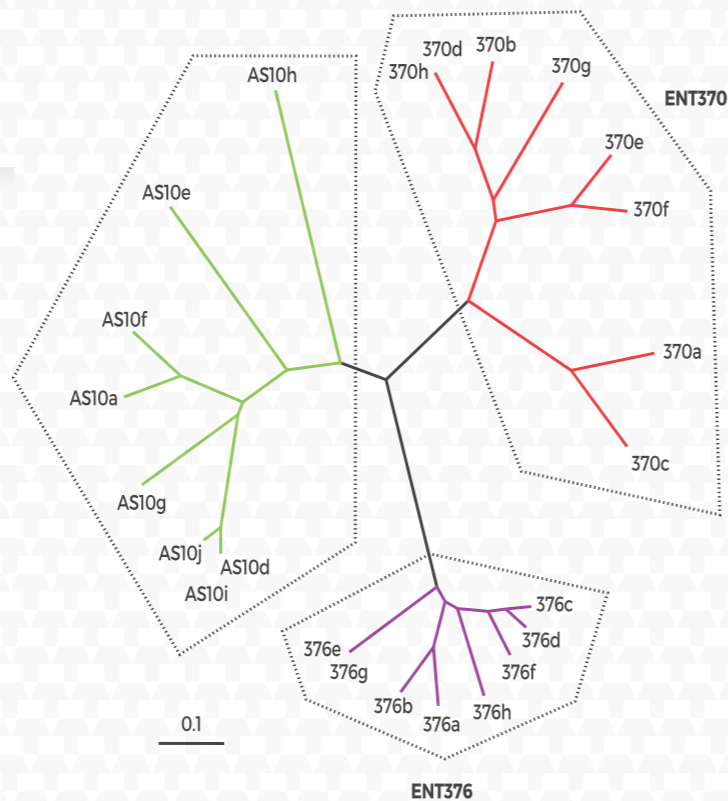

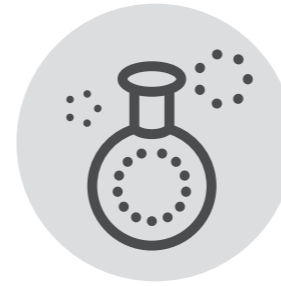

Illustration above indicates the termite sample vouchers collected have originated from 3 different colonies by comparing their DNA profile.

HIGHLY PALATABLE BAIT FORMULATION DEVELOPED IN AUSTRALIA

Exterminex™ bait was formulated by a botanist and a chemist in Australia in 2005 to solve inconsistency in the baiting sector. After its development and success in Malaysia, Thailand, Philippines, Cambodia, Pakistan, UAE, China and Hong Kong, Exterminex was launched in Australia with APVMA approvals in 2015.

Exterminex™ bait uses high grade natural cellulose. This can be observed with its unique color, smell and texture.

Termites take to Exterminex™ bait fast and consistent when installation is done correctly. We strive to be "The Preferred Bait" for Australian Pest Control Professionals, Installers & Home Owners.
